

Prototyping WildFly Applications with JBang

Jeff Mesnil <jmesnil@redhat.com>

About Me

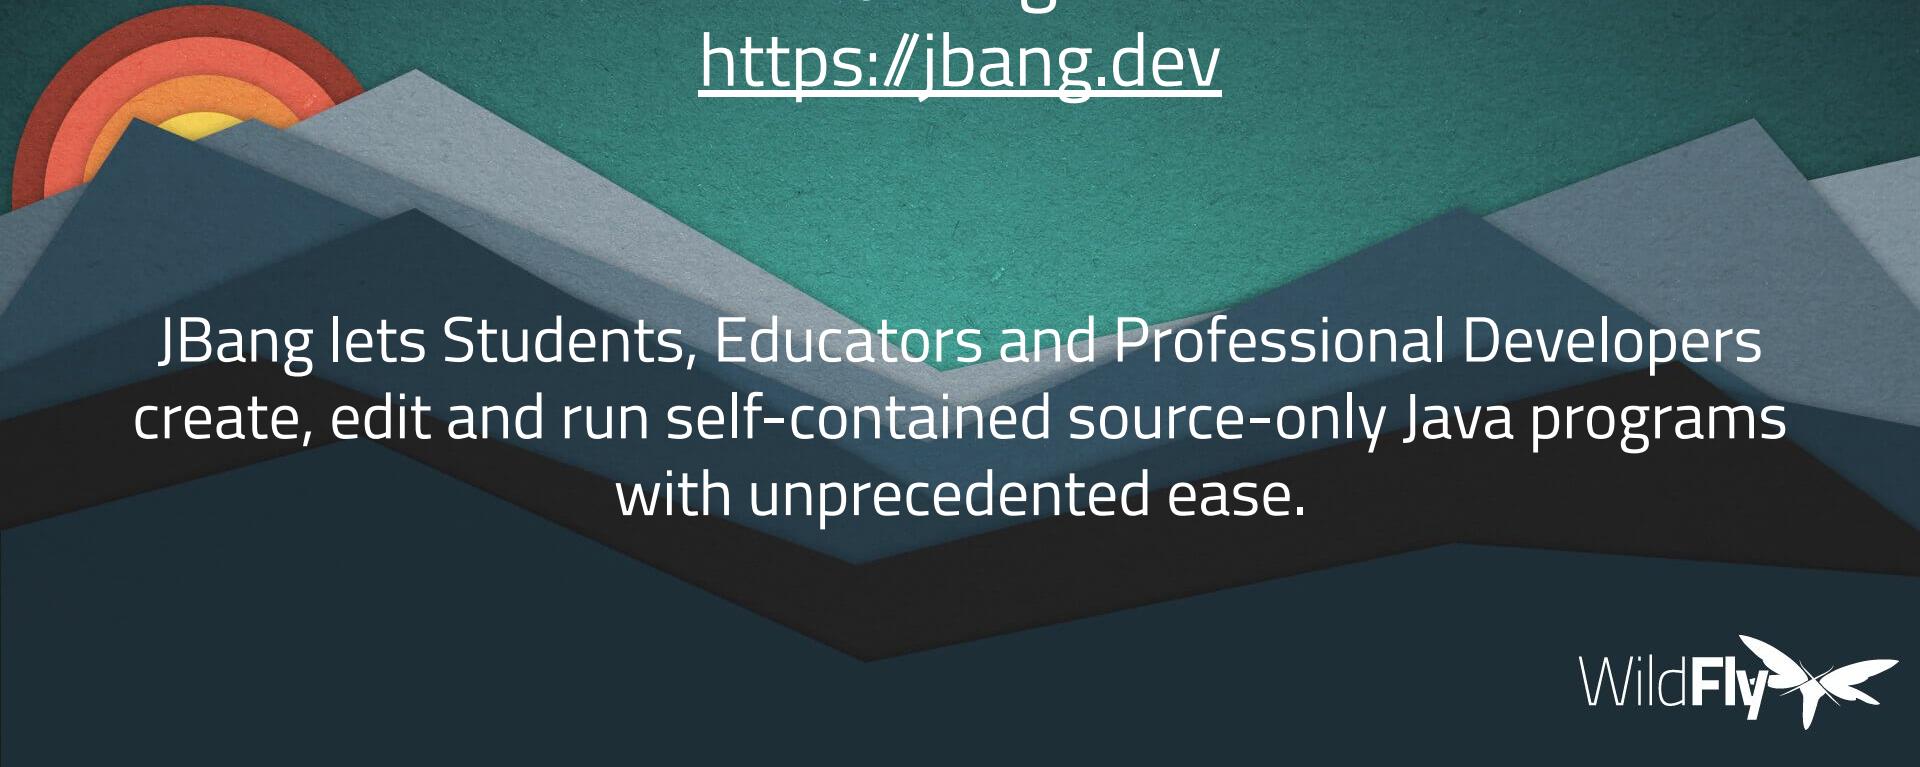

- ▶ Senior Principal Software Engineer @ Red Hat
- ▶ Joined the WildFly team in 2012
- ▶ Worked on Messaging & Core capabilities of WildFly
- ▶ Working on its Cloud enablement and User Experience
- ▶ <https://jmesnil.net/>

Agenda

- ▶ Introduction to **JBang**
- ▶ Write a simple Web application running with **WildFly**
- ▶ WildFly **Glow**
- ▶ Write an AI Chat bot
- ▶ Q&A

JBang

<https://jbang.dev>

JBang lets Students, Educators and Professional Developers create, edit and run self-contained source-only Java programs with unprecedented ease.

JBang

Download JBang (Java not required)

```
$ curl -Ls https://sh.jbang.dev | bash -s - app setup

$ jbang --help
jbang is a tool for building and running .java/.jsh scripts and jar packages.
Usage: jbang [-hV] [--insecure] [--preview] [--config=<config>] [--verbose |
    --quiet] [-o | --fresh] [COMMAND]
[...]
```

JBang

```
//usr/bin/env jbang "$0" "$@" ; exit $?
//DEPS com.github.lalyos:jfiglet:0.0.8

import com.github.lalyos.jfiglet.FigletFont;

class myapp {
    public static void main(String[] args) throws Exception {
        String name = args.length==0 ? "World" : args[0];
        String hello = String.format("Hello, %s!", name);
        System.out.println(FigletFont.convertOneLine(hello));
    }
}
```

<https://gist.github.com/jmesnil/256b3fe1c07cc3ba1942034057f76b47>

Demo

JBang

```
$ jbang run myapp.java  
[jbang] Building jar for myapp.java...
```

```
[-+---] [---] [-+---] [---]  
[-+---] /_ \ [-+---] /_ \  
[-_+---] | _/ | [-+---] | ( ) | _  
[-+---] \_ / | [-+---] \_ / ( )  
| /
```

```
$ jbang run myapp.java Bob
```

```
[-+---] [---] [-+---] [---]  
[-+---] /_ \ [-+---] /_ \  
[-_+---] | _/ | [-+---] | ( ) | _  
[-+---] \_ / | [-+---] \_ / ( )  
| /
```

JBang

```
$ jbang run https://qist.github.com/jmesnil/256b3fe1c07cc3ba1942034057f76b4 Alice
```

The Alice logo, a complex arrangement of black, green, and white lines forming a stylized face or flower-like pattern.

JBang

WildFly

<https://wildfly.org>

A powerful, modular, & lightweight application server that helps you build amazing applications.

Web Application

```
//usr/bin/env jbang "$0" "$@" ; exit $?
//DEPS com.github.lalyos:jfiglet:0.0.8
//DEPS org.wildfly.bom:wildfly-expansion:35.0.1.Final@pom
//DEPS jakarta.ws.rs:jakarta.ws.rs-api
//DEPS jakarta.enterprise:jakarta.enterprise.cdi-api
//DEPS org.wildfly.glow:wildfly-glow:1.3.2.Final
```

<https://gist.github.com/jmesnil/5f86e521068f6921f80ebb142c7f4704>

```
import jakarta.enterprise.context.ApplicationScoped;
import jakarta.ws.rs.*;
import jakarta.ws.rs.core.*;
import com.github.lalyos.jfiglet.FigletFont;

@ApplicationPath("/")
public class myapp extends Application {
    @Path("/hello")
    @ApplicationScoped
    public static class Hello {
        @GET
        public String sayHello(@QueryParam("name") @DefaultValue("World") String name) throws Exception {
            String hello = String.format("Hello, %s!", name);
            return FigletFont.convertOneLine(hello);
        }
    }
}
```

Demo

Web Application

```
$ jbang run myapp.java

```

MicroProfile Application

```
$ HELLO="Bonjour" ./myapp.java  
$ curl "http://localhost:8080/myapp/hello?name=Alice"
```

A large, faint watermark of the Java logo is centered on the slide. It features two interlocking rings, each containing a stylized 'J' character, with the word 'JAVA' written horizontally across the center.

WildFly Glow

WildFly Glow is an evolution of the WildFly [Galleon](#) provisioning tooling.

It provides tooling allowing to identify the set of Galleon Feature-packs and Layers that are required by your application. The entry-point of this discovery is your application.

- [WildFly Glow Documentation](#)
- [Introduction to WildFly Glow](#)
- [WildFly Glow Lightning Talk @ WildFly Mini Conference Nov 2024](#)

Glow Arguments

```
//GLOW --server-version=34.0.0.Final
```

👉 Specify the version of WildFly to run the application

```
//GLOW --add-ons=health,metrics,openapi
```

👉 Specify the add-ons to provision in WildFly that can not be inferred by your code

```
//GLOW --spaces=incubating
```

👉 Provision additional WildFly capabilities that are in the incubating space (more on that later)

Glow Arguments

```
//GLOW --add-ons=health,metrics,openapi

$ curl "http://localhost:9990/metrics"
$ curl "http://localhost:9990/health""
$ curl "http://localhost:8080/openapi
```

Demo

AI Chat bot

Let's write an AI chat bot that explains to kids the etymology of a given word.

We will use an [Ollama](#) chat model and [LangChain4j](#) to write the Java code.

WildFly provides an [AI Feature Pack](#) that provides the integration with LangChain4j.

AI Chat bot

```
///usr/bin/env jbang "$0" "$@" ; exit $?
//DEPS org.wildfly.bom:wildfly-expansion:35.0.1.Final@pom
//DEPS org.wildfly.glow:wildfly-glow:1.3.2.Final
//DEPS jakarta.ws.rs:jakarta.ws.rs-api
//DEPS jakarta.enterprise:jakarta.enterprise.cdi-api
//DEPS dev.langchain4j:langchain4j-bom:1.0.0-beta2@pom
//DEPS dev.langchain4j:langchain4j
//GLOW --spaces=incubating

import dev.langchain4j.data.message.*;
import dev.langchain4j.model.chat.ChatLanguageModel;
import jakarta.enterprise.context.RequestScoped;
import jakarta.inject.*;
import jakarta.ws.rs.*;
import jakarta.ws.rs.core.*;

@ApplicationPath ("/")
public class myaiapp extends Application {
    @Path("/chat")
    @RequestScoped
    public static class Chat {
        @Inject
        @Named(value = "ollama")
        ChatLanguageModel chatModel;

        @GET
        @Produces(MediaType.TEXT_HTML)
        public String chatWithAssistant (@DefaultValue ("Orange") @QueryParam ("word") String word) throws Exception {
            return chatModel.chat(
                SystemMessage
                    .from(""""
                        You are a teacher that explain to kids the origin of some words.
                        Your response must be polite, use the same language as the question, and be relevant to the question.
                        Your answer must be embedded in HTML.
                    """ ),
                UserMessage .from(String.format ("What is the etymology of %s?", word))
                .aiMessage ().text ());
        }
    }
}
```

<https://gist.github.com/jmesnil/4e4b7e44ec8174a79c85fe0c1c18e0d7>

Ollama Prerequisites

```
$ podman run -d --rm --name ollama -p 11434:11434 -v ollama:/root/.ollama ollama/ollama
$ podman exec -it ollama ollama pull llama3.2:1b

$ OLLAMA_CHAT_MODEL_NAME=llama3.2:1b ./myaiapp.java

$ open http://localhost:8080/myaiapp/chat?word=Orange
```

Demo
